Introduction

This training course will give you the basic practical skills and associated knowledge required to effectively and safely operate the Hot Water Weed Control equipment for sustainable weed management.

Overview in brief

Hot water is one of the most effective natural transmitters of thermal energy and all our systems are as a result of our unique Boiling Hot water Technique® to deliver a low pressure 98°C impact with weeds destroying the cellular structure of the plant and roots.

Our Operator training programme accredited by LANTRA covers the theoretical aspects of the safe operation of the equipment as well as all the practical aspects. The training programme also gives the operator awareness of the potential risks and hazards associated when operating associated with the equipment in the working environment.

The course can accommodate up to 6 trainees and can be carried out anywhere within the UK.

A classroom environment for the theoretical presentation and the operational HWWC equipment in an outdoor environment are required.

The finer details

The HWWC training programme is split into 2 sections, both lasting for approximately 2 hours per session (dependent on the ability of the trainees). In the first session the attendees will be made aware of:

- the relevant Health & Safety legislation surrounding the use of the HWWC equipment,
- understand their responsibilities & the responsibilities of the employer
- walked through the safest & most efficient way to operate the equipment
- complete a short theory test to demonstrate their understanding the safe operation of the equipment.

During the second half of the programme the trainees will be given the opportunity to gain a small amount of experience and given time to familiarise themselves with the practical operational aspects and putting into practice some of the aspects which they learned in the classroom:

- The applications of the HWWC equipment under normal working conditions, covering simple tasks of all the equipment operations
- Experiencing the equipment controls
- Instruction as to the daily care of the vehicle.
- Gaining a small amount of experience into the best usage of the HWWC equipment.
