Delivery Method: Classroom

Recognised by: DEFRA

Introduction

This is a course aimed at non-veterinarians who wish to learn the art of pregnancy diagnosis for own farm use or as a commercial enterprise. As a non-veterinarian, it is a legal requirement to have completed an Approved Course to carry out pregnancy screening.

The finer details

Our four-day course will give you all the necessary techniques to achieve a level of competence with the Scanning technique to be able to diagnose the empty uterus in comparison to the pregnant uterus, with plenty of time for practice.

The course sessions cover:

- Anatomy of the Pelvic Region
- Physiology of Reproduction
- Theory of Ultrasonography
- Scanning Techniques
- Operator Hygiene and Disease Control

You'll receive a certificate on completion of the course.

Who should attend?

Anyone aged 16 years and over who wish to learn the art of pregnancy diagnosis for own farm use or as a commercial enterprise.

What will be covered?

Our Layscanning course will cover the following information:

- Anatomy of the Pelvic Region
- Physiology of Reproduction
- Theory of Ultrasonography
- Scanning Techniques
- Operator Hygiene and Disease Control

Scanning is the most accurate method of pregnancy diagnosing cows. In comparison to other diagnosing methods, scanning is the most time effective and puts minimal stress on the animals. The ability to date pregnancy and early determination of barren cows gives farmers a huge advantage in forward planning.
