Delivery Method: Classroom

Introduction

A five-day course intended for both newly appointed and existing Police traffic management officers (TMO). It provides the knowledge and skills necessary to fulfil many of the functions of the role and provides an opportunity for learners to demonstrate their competency.

Overview in brief

This course is designed to fulfil the initial training requirements of a Police TMO by providing an overview of traffic management concepts and principles, with more detailed coverage of those areas most commonly coming within the scope of the police TMO role.

The finer details

The five-day course is delivered over nine distinct taught modules and concludes with a time-constrained written assessment, which requires an analysis of supplied data and a consideration of options to mitigate an identified traffic management/road safety problem.

The module breakdowns are as follows:

Day 1 am – Introduction to Traffic Management

Day 1 pm – Highway Law

Day 2 am – Traffic Regulation Orders

Day 2 pm – Speed Limits

Day 3 am – Temporary Traffic Management

Day 3 pm – Signs and Road Markings

Day 4 am – Highway Design

Day 4 pm – Road Safety Engineering

Day 5 am – Road Safety Audit

Day 5 pm – Assessment

Who should attend?

The course is intended for both newly-appointed and experienced Police Traffic Management Officers.

What will be covered?

By the end of the course, the learner will be able to:

-       Identify the legal and procedural requirements and limitations of the role of the police traffic management officer.

-       Identify the correct sources of information relating to the main aspects of the role of police TMO.

-       Advise and direct police colleagues and other applicants in matters relating to traffic management, road safety and highway engineering.
